

Harris County Appraisal District
 Business & Industrial Property
 Value Calculation Guidelines
 Tax Year 2009

Asset Category	Schedule
A. Inventory	100% Original Cost
B. Supplies	100% Original Cost
C. Raw Materials	100% Original Cost
D. Work in Process	100% Original Cost
E. Furniture & Fixtures	8-Year %GD Schedule
F. Machinery & Equipment	
1. General Office Equipment.....	6-Year %GD Schedule
2. Specific Equipment.....	Specific Equipment Schedule
Includes Mobile Radio Equipment, Telephone Systems (PBX), Cellular Telephones, & FAX Machines	
3. All other Machinery & Equipment.....	%GD Schedule Based on the Type of M&E: (Refer to SIC Code List)
G. Computer Equipment	
1. P.C. Computer Equipment / Servers	P.C. Schedule
Note: Includes Input/output devices or peripherals. Examples; CPU, keyboard, mouse display, HP printers, and servers.	
2. Mainframe	Mainframe Schedule
Examples of Mainframe types; IBM System z10, historically IBM System/360, Systemz9, Systemz10 servers, logical partitions (LPARs, via the PR/SM facility), virtual machines (via the z/VM operating system), (operating systems z/OS), Linux, OpenSolaris and Java, high speed production printers.	
H. Leasehold Improvements	6-Year %GD Schedule
I. Vehicles.....	NADA
Note: The new age mix (NAM) schedule does not apply to vehicles. Vehicles will be carried on a separate account for 2009. Equipment mounted on vehicles must be listed on the main account with all other Machinery & Equipment.	
J. Miscellaneous Assets	%GD Schedule Based on the Type of Asset

The cost indexed is obtained by Marshall & Swift's national average cost information for equipment as published in October each year. The reported cost will be cost indexed using Marshall & Swift national average cost information for equipment as published in October 2008 to arrive at the replacement cost new than multiplied by the percent good factor (%GD). The Present Value Factors (PVFs), used for the calculation of the Book Value to Market Value Conversion method, will be cost indexed using Marshall & Swift national average cost information for equipment as published in October 2008.

Note: These value calculation guidelines normally apply to items appraised by the Personal Property Division. Appraisers may apply an obsolescence factor to newer assets if the overall asset age mix is out of balance. These schedules may also be used for the appraisal of Industrial Personal Property by the Industrial Valuation Group. However, industrial properties may be subject to different maintenance regimens and may have longer useful lives. A combination of a longer schedules and factors representing condition may be used for such property. In any event, these schedules are guidelines and may be overridden based on the documentation presented in a hearing and the judgment of the appraiser.

YEAR OF ACQUISITION

The percent good factor (%GD) schedules for the YEAR OF ACQUISITION METHOD are to be used when original cost is known by year of acquisition. Refer to the property category, such as Furniture & Fixtures, to determine the appropriate useful life %GD schedule. The original cost is multiplied by the Index Factor, which equals the replacement cost then multiply by the %GD for the acquisition year to arrive at a calculated rendered value for that category.

BOOK VALUE TO MARKET VALUE CONVERSION

If the original cost by year of acquisition is not known, but the original cost and depreciation are known by category, the tables for BOOK VALUE / MARKET VALUE CONVERSION are to be used. First, divide the accumulated depreciation by the original cost to determine the percentage of book depreciation. The percentage of book depreciation is used to determine which present value factor (PVF) to apply. The original cost is multiplied by the PVF factor to arrive at a calculated rendered value for that category.

NET BOOK VALUE

Original cost less accumulated depreciation equals NET BOOK VALUE. The net book value is calculated and compared to the BOOK VALUE / MARKET VALUE CONVERSION METHOD of valuation. If the net book value is greater than the book value / market value method, then the net book value is used to arrive at a calculated rendered value for that category. The NET BOOK VALUE is **not** used to override the YEAR OF ACQUISITION METHOD of valuation.

NEW ASSET MIX (NAM)

The New Asset Mix (NAM) is an obsolescence factor that is applied when most of the assets in a category are newer, therefore compensating for the age mix being out of balance. Each year life, the computer schedules, and the specific equipment schedule have separate NAM factors. Please note the new age mix schedule does not apply to vehicles.
