EXECUTIVE SUMMARY

TAX CODE REQUIREMENT

The Written Plan

Each appraisal district is required to adopt a written reappraisal plan every two years. Tax Code, Section 6.05(i), provides:

- (i) To ensure adherence with generally accepted appraisal practices, the Board of Directors of an appraisal district shall develop biennially a written plan for the periodic reappraisal of all property within the boundaries of the district according to the requirements of Section 25.18 and shall hold a public hearing to consider the proposed plan. Not later than the 10th day before the date of the hearing, the secretary of the board shall deliver to the presiding officer of the governing body of each taxing unit participating in the district a written notice of the date, time, and place of the hearing. Not later than September 15 of each even numbered year, the board shall complete its hearings, make any amendments, and by resolution finally approve the plan. Copies of the approved plan shall be distributed to the presiding officer of the governing body of each taxing unit participating in the district and to the comptroller within 60 days of the approval date.

Implementation of Plan

The district is required to implement the plan. Subsections (a) and (b), Section 25.18, Tax Code, provide as follows:

- (a) Each appraisal office shall implement the plan for periodic reappraisal of property approved by the board of directors under Section 6.05 (i).
- (b) The plan shall provide for the following reappraisal activities for all real and personal property in the district at least once every three years:
 - (1) Identifying properties to be appraised through physical inspection or by other reliable means of identification, including deeds or other legal documentation, aerial photographs, land-based photographs, surveys, maps, and property sketches;
 - (2) Identifying and updating relevant characteristics of each property in the appraisal records;
 - (3) Defining market areas in the district;

- (4) Identifying property characteristics that affect property value in each market area, including:
 - (A) The location and market area of the property;
 - (B) Physical attributes of property, such as size, age, and condition;
 - (C) Legal and economic attributes; and
 - (D) Easements, covenants, leases, reservations, contracts, declarations, special assessments, ordinances, or legal restrictions;
- (5) Developing an appraisal model that reflects the relationship among the property characteristics affecting value in each market area and determines the contribution of individual property characteristics;
- (6) Applying the conclusions reflected in the model to the characteristics of the properties being appraised; and
- (7) Reviewing the appraisal results to determine value.

REVALUATION DECISION (REAPPRAISAL CYCLE)

The Bexar Appraisal District, by policy adopted by the Chief Appraiser and Board of Directors, conducts a reappraisal of all property annually. A property's appraised value is established and reviewed for equality and uniformity each year and properties are inspected either in the field or through aerial review. The district subscribes to the standards promulgated by the Appraisal Foundation known as the *Uniform Standards of Professional Appraisal Practice* (USPAP) to the extent they are applicable and adheres to the standards of the International Association of Assessing Officers (IAAO) regarding its appraisal practices and procedures.

REAPPRAISAL YEAR ACTIVITIES

1. Performance Analysis – the equalized values from the previous appraisal year are analyzed with ratio studies to determine appraisal accuracy and appraisal uniformity overall and by market area within property categories. Ratio studies are conducted in compliance with the current *Standard on Ratio Studies* of the International Association of Assessing Officers.
2. Analysis of Available Resources – staffing and budget requirements for appraisal year 2015 are detailed in the 2015 budget, as adopted by the Board of Directors. Existing appraisal practices, which are continued from year to year, are identified and methods utilized to keep these practices current are specified by district management. Information Systems (IS) support is detailed with year specific functions identified by management and system upgrades

scheduled as necessary. Existing maps and data requirements are specified and updates scheduled as required. Field mobile devices are updated, maintained and distributed as required.

3. Planning and Organization – a calendar of key events with critical completion dates is prepared for the district. This calendar identifies the key events and operational tasks for the preparation of the appraisal roll. A calendar is prepared and included for appraisal years 2015 and 2016 (Appendix A & B). Production standards for field activities are calculated and incorporated in the planning and scheduling process in order to reach goals / mandates set by both district management and the Tax Code.
4. Mass Appraisal System – Computer Assisted Mass Appraisal (CAMA) system revisions required are specified and scheduled with Information Systems and the district's software vendor. All computer forms and IS procedures are reviewed and revised annually as required.
5. Data Collection Requirements – field and office procedures are reviewed and revised as required for data collection. Activities scheduled for each appraisal year include new construction, demolition, remodeling, re-inspection of problematic market areas, re-inspection of the universe of properties on a specific cycle (4 – 6 years, per IAAO Standard) and field or office verification of sales data and property characteristics.
6. Pilot study by appraisal year – new and/or revised mass appraisal models / schedules are tested each appraisal year. Ratio studies, by market area, are conducted using proposed values each appraisal year. Proposed values in each category are tested for accuracy and reliability using standardized testing procedures and ratio study statistics.
7. Valuation by appraisal year – using market analysis of comparable sales, locally tested cost data, and income analysis, valuation models are specified and calibrated in compliance with supplemental standards from the International Association of Assessing Officers and the *Uniform Standards of Professional Appraisal Practice*. The calculated values are tested for accuracy and uniformity using ratio studies.
8. The Mass Appraisal Report – each appraisal year the district plans to prepare the Mass Appraisal Report and it shall be certified by the Chief Appraiser at the conclusion of the appraisal phase of the ad valorem tax calendar (on or about May 15th). The Mass Appraisal Report will be completed in compliance with STANDARD RULE 6 – 8 of the *Uniform Standards of Professional Appraisal Practice*. The signed certification by the Chief Appraiser is compliant with STANDARD RULE 6 – 9 of *USPAP*.
9. Value defense – evidence to be used by the appraisal district to meet its

burden of proof for market value and appraisal equity in both informal and formal hearings is specified and tested as applicable.

REAPPRAISAL PLAN DETAIL

The Bexar Appraisal District by policy adopted by the Chief Appraiser and its Board of Directors reappraises all property in the district annually. Therefore, both of the years covered by this reappraisal plan are reappraisal years.

PERFORMANCE ANALYSIS

In each appraisal year, the previous appraisal year's equalized values are analyzed with ratio studies to determine appraisal accuracy and appraisal uniformity overall. In its annual procedures, the district tests values by market area within state property reporting categories. Ratio studies are conducted in compliance with the current *Standard on Ratio Studies* from the International Association of Assessing Officers. Mean, median, and weighted mean ratios are calculated as measures of central tendency for properties in each reporting category to measure the level of appraisal accuracy. The median ratio is the primary measure of central tendency analyzed in each market area to indicate the level of appraisal accuracy by property reporting category. In each reappraisal year this analysis is used to develop the starting point for establishing the level and accuracy of appraisal performance. The district also calculates the coefficient of dispersion and price related differential in each market area to indicate the uniformity or equity of existing appraisals.

ANALYSIS OF AVAILABLE RESOURCES

Staffing and budget requirements for appraisal year 2015 are detailed in the 2015 appraisal district budget, as adopted by the Board of Directors. This reappraisal plan is adjusted to reflect the expected available staffing in appraisal year 2015 and the anticipated staffing for appraisal year 2016. Staffing will impact the cycle of real property and personal property on-site re-inspection that can be accomplished in this time period.

Information Systems (IS) support is detailed with year specific functions identified by management and system upgrades are scheduled with the district's software vendor. Computer generated forms are reviewed for revisions based on year and reappraisal status. Legislative changes are scheduled for completion and also tested through coordination between the district's IS department and its software vendor. Existing maps and data requirements are developed and updates coordinated between the district's GIS department and IS department in order to make these tools available to the appraisal staff. In addition to GIS, the district utilizes oblique photography to aid in updating property characteristics as appropriate.

During the latter half of the 2014 field cycle, a field mobile device was introduced on a test basis. Sixty (60) field devices are now ready to be implemented full scale to the 2015 field cycle. The device will allow for significant field preparation and data entry efficiencies in residential and commercial field work. The intent is to integrate the BPP module in 2016.

The Bexar Appraisal District, as well as all appraisal districts in Texas, is specifically hindered when valuing property due to the lack of mandatory sales disclosure. The lack of mandatory sales disclosure restricts the information that is available to CAD's when using the Sales Comparison Approach, especially on the high end of the value spectrum of residential property and with regard to most non-residential real property. The lack of mandatory sales price disclosure also impacts values developed via the income approach by restricting the type of data necessary to calculate an overall capitalization rate from sold comparable properties. Should mandatory sales price disclosure become law; the district will have an additional tool with which to value property which will foster further accuracy and equity in appraisals.

PLANNING AND ORGANIZATION

A calendar of events is prepared for the district. This calendar identifies key events and operational tasks for developing the appraisal roll. A separate calendar is prepared for appraisal years 2015 and 2016 See Appendix A & B. Production standards for field activities are calculated and incorporated in the planning and scheduling process. This plan encompasses the normal processes carried out for each year by the district, therefore catastrophic events or significant legislative action may have a detrimental effect to the district's operations and require changes to this plan.

It is yet to be seen what the actual impact of the field devices will be on production. Initial testing cut the field process by as much as two-thirds. However, as with the introduction of all new technology, there will be a learning curve that requires significant adjustment from the appraisers. It is our hope that staff will acclimate quickly, and we can then better assess its production impact. We will then adjust our planning and organizing of field work to include more on-site inspections.

MASS APPRAISAL SYSTEM

Mass appraisal is the process of valuing a group of properties as of a given date using common data, standardized methods, and statistical testing. Existing appraisal practices, which are continued from year to year, are identified in procedure manuals and district staff is appropriately trained in order to maintain their proficiency in mass appraisal.

The district employs a Computer Assisted Mass Appraisal (CAMA) system whose revisions are specified by the district management team and scheduled with Information Systems and the district's software vendor. The district currently, and for the foreseeable future, contracts with True Automation, Inc for software services. All automated forms and IS procedures are reviewed routinely and revised as required.

The district has introduced the use of a web based application called CAMA Cloud to be used on iPads. The application is integrated into the current CAMA system for real property appraisal.

The following details the procedures as it relates the 2015 and 2016 appraisal years:

REAL PROPERTY VALUATION

Revisions to cost models, income models, and market models are specified, updated, and tested each appraisal year. Market area boundaries are reviewed and adjusted as indicated by growth patterns and market preferences. Deeds are processed on an ongoing basis to transfer ownership, establish the basis for land size, and assign account numbers to newly platted lots as an addition to the appraisal roll. The district will also update and process exemption and special use appraisal applications as necessary and applicable.

Cost schedules are tested with market data (sales) to insure that the appraisal district is in compliance with Texas Property Tax Code, Section 23.011. Replacement cost new tables as well as depreciation tables are tested for accuracy and uniformity through ratio studies and in comparison with cost data from the Marshall Valuation Service (also known as *Marshall and Swift*), which is a nationally recognized cost service.

Income, expense, and occupancy data is updated in the income models for each property use category and market area. Market income and expense data is obtained from published sources as well as from actual rent rolls and operating statements provided by property owners. Property categories are reviewed to ensure their continued applicability. Cap rate studies are completed using current sales data when available, and published sources are also utilized. The resulting models are tested using ratio study tools.

Land tables are updated using current market data (sales) and then tested with a ratio study. Value modifiers are developed for property categories by market area and tested on a pilot basis before deployment with a ratio study / calibration tools.

PERSONAL PROPERTY VALUATION

Density schedules are updated using data received during the previous appraisal year from renditions and hearing documentation. Valuation procedures are reviewed, modified as necessary, and tested.

NOTICING PROCESS

Section 25.19 appraisal notice forms are reviewed, edited for updates, and changes are approved by the appraisal district management team. These revisions include updates from the Comptroller's Property Tax Assistance Division as well as specific legislative changes as required. Updates also include the latest copy of the Comptroller's *Taxpayers Rights and Remedies*.

HEARING PROCESS

Protest hearing scheduling for informal and formal Appraisal Review Board hearings is reviewed and updated as required by protest load in order to certify by July 25 according to law. Standards of documentation are reviewed and amended as required. The appraisal district hearing documentation is reviewed and updated to reflect the current valuation processes and legal requirements.

DATA COLLECTION REQUIREMENTS

District appraisal staff collects information regarding both individual property characteristics as well information concerning the neighborhood or market area in compliance with section 25.18 (b)(4) of the Texas Property Tax Code. These include a consideration of the location and market area of each property; Physical attributes of property, such as size, age, and condition; Legal and economic attributes; and Easements, covenants, leases, reservations, contracts, declarations, special assessments, ordinances, or legal restrictions.

Field and office procedures are reviewed and revised as required for the data collection process. Production standards are established in order to monitor and assure the completion of the data collection phase by the projected deadline for the appraisal year. Activities scheduled for each appraisal year include the defining of market areas, review of new construction, demolition, remodeling, re-inspection of problematic market areas, re-inspection of the universe of properties, and verification of sales information.

DEFINING MARKET AREAS

Market areas are defined by the physical, economic, governmental and social forces that influence property values. The effects of these forces are used to identify, classify, and stratify properties into smaller, more comparable and manageable subsets for valuation purposes. Delineation can involve the physical drawing of neighborhood boundaries on a map, or it can involve separation based on attribute analysis.

Commercial and personal property have been delineated into work areas. They are further defined by use codes for comparison. Refer to Appendix C & D, respectively, for maps, boundary descriptions, and use code lists. Residential properties have been delineated into valuation neighborhoods and are coded with the appropriate neighborhood code. Refer to Appendix E for the 2014 list of neighborhood codes inclusive of their map locations, major boundaries and life cycle status.

Because there are discernible patterns of growth that characterize a neighborhood or market segment, the district will annually evaluate the neighborhood boundaries or market segments to ensure homogeneity of property characteristics and market preferences. The market area delineations and the market areas themselves identified in Appendices C, D, and E are subject to refinement once staff conducts further market analysis.

NEW CONSTRUCTION / DEMOLITION

Building permit data received from the various cities and county are inputted into the system by data entry staff and then verified by appraisal staff. The process of verifying the new construction or demolition of improvements is specified by each department. Residential neighborhoods with high volumes of new construction and/or demolition are reviewed in their entirety, regardless of the existence of permits. Building plans and/or blueprints are obtained and dimensions are entered into the system by data collections staff. Appraisal staff checks the accuracy of the measurements in the field during data review. Quality review is conducted to verify accuracy of the data.

REMODELING

Market areas with extensive improvement remodeling are identified and monitored on an ongoing basis. Field activities are scheduled to verify the degree of remodeling and relevant property characteristic data are updated as appropriate.

RE-INSPECTION OF PROBLEMATIC MARKET AREAS

Real property market areas, by property classification, are tested for: low or high protest volumes; low or high sales ratios; or high coefficients of dispersion. Market areas that fail any or all of these tests are determined to be potentially problematic. Field reviews are scheduled to verify and/or correct property characteristic data and review neighborhood delineation. Additional sales data is researched and verified as applicable. In the absence of adequate market data, clusters of comparable neighborhoods are identified and linked for use in valuation and defense.

RE-INSPECTION OF THE UNIVERSE OF PROPERTIES

The International Association of Assessing Officers, *Standard on Mass Appraisal of Real Property*, specifies that the universe of properties should be re-inspected on a cycle of 4-6 years. Digital imaging technology tools may be used to supplement field re-inspections with a computer-assisted office review.

Staffing will have a direct impact on the amount of on-site review that can be accomplished during this reappraisal time period. Therefore, real property re-inspection will be completed using a combination of field inspections and office review. Office review of property will consist of the examination and comparison of yearly flown aerial photography with existing property sketches and property characteristics via our sketch overlay program. This tool allows us access at a bird's eye giving us an opportunity to resolve discrepancies between the appraisal records and what is actually on the ground. This aerial ortho photography, along with the oblique photography of Pictometry, allows for digital verification of building measurements and visual inspection of external economic influences.

FIELD OR OFFICE VERIFICATION OF SALES DATA AND PROPERTY CHARACTERISTICS

Sales information must be verified and property characteristic data contemporaneous with the date of sale is captured in the sale record. The sales ratio tools require that the property that sold must equal the property appraised in order that statistical analysis results will be valid. In the event that these are not roughly equal, the sale is usually excluded from the observation pool in the ratio study. These sales can be utilized during value defense due to the CAMA software's ability to adjust from the captured characteristics contemporaneous with the date of sale as supposed to the appraisal record.

PILOT STUDY BY APPRAISAL YEAR

New and/or revised mass appraisal models are tested on randomly selected market areas. These modeling tests (sales ratio studies) are conducted each appraisal year. Actual test results are compared with anticipated results and those models not performing satisfactorily are refined and retested. The procedures used for model specification and model calibration are in compliance with *Uniform Standards of Professional Appraisal Practice*, STANDARD RULE 6.

VALUATION BY APPRAISAL YEAR

Using market analysis of comparable sales and locally tested cost data, specific income and expense data, and information gathered from renditions, valuation models are specified and calibrated in compliance with the supplemental standards from the International Association of Assessing Officers and the *Uniform Standards of Professional Appraisal Practice*. The calculated values are tested for accuracy and uniformity using ratio studies by market area and property category. Performance standards utilized are those as established by the *IAAO Standard on Ratio Studies*. Property values in all market areas are reviewed each reappraisal year and updated as indicated by existing market data.

The following details the planned valuation methods by department and or property type:

RESIDENTIAL REAL PROPERTY

Cost Approach

The district uses a hybrid cost-market approach when valuing residential properties. The comparative unit, also known as the Square-foot method, will be used to develop an indication of the basic cost of a structure. Adjustments will then be made for amenities of individual properties based upon characteristics of the property that affect value in the market area. The district's cost tables are, and will continue to be, based upon information obtained from the Marshall Valuation Service, also known as *Marshall and Swift*. These cost figures are adjusted to the local market to reflect current local labor and material costs. Neighborhood Market Adjustment factors will be developed from

appraisal statistics provided by ratio studies to ensure that estimated values reflect both the supply and demand side of the market in each specific neighborhood. The following equation is the hybrid model used by the district:

$$MV = LV + [RCNLD*MA]$$

In applying the calculations of the model above, the district staff values the land as though vacant and available for development to its highest and best use. The replacement cost new less depreciation (RCNLD) of the improvements are multiplied by the appropriate neighborhood market adjustment factor (MA) to arrive at a current improvement value. The current improvement value is added to the land value (LV) to arrive at an estimate of market value (MV). Market adjustments will be applied uniformly within neighborhoods to account for market preferences affecting value in each location throughout the district.

Residential land values will be estimated using the base lot method, square foot method, or acreage method of appraisal. The individual method utilized in each neighborhood is designed to mirror the market in that area. As such, the chosen method for each individual neighborhood will be selected based upon how properties are selling or which method best accounts for perceived differences among the universe of properties. There are four accepted methods for land valuation; the comparable sales approach, allocation by abstraction, allocation by ratio, and the capitalization of ground rent. The district will utilize elements of all of these land valuation methods depending upon market area and availability of market data. In areas where insufficient vacant land sales exist, the district employs the allocation methods to establish land values in a neighborhood. Land value adjustments may be made when target uniformity standards are not realized or land to building ratios become disproportionate. The appraisers will develop a base lot or primary land rate and assign land tables to each neighborhood. Land characteristics adjustments will be applied to individual properties, where necessary, to adjust for such influences as view, shape, size, and topography, and any other characteristic that affects value in a neighborhood.

If neighborhood statistics indicate that values need to be updated, the appraiser will employ cost calibration analysis to bring the initial values closer to what the market indicates values should be in that area. This process involves comparing the initial depreciated cost figures for properties that sold to the sale contributory improvement values of those properties (Sale Price – Land Value). An adjustment factor is calculated for each property in the data pool and statistics are calculated for the indicated adjustments. The factor that best represents the acceptable range of market value is selected for each neighborhood. The sales used to determine the market adjustment factor will reflect the market influences and conditions for the specified neighborhood, thus producing more representative and supportable values. The market adjustment factor calculated for each neighborhood will be applied uniformly to all properties within that neighborhood and a second set of ratio study statistics will be generated to compare the level and uniformity of values in the neighborhood as adjusted.

Sales Comparison Approach

As indicated in *Property Appraisal and Assessment Administration* (IAAO, 1990), in the absence of a sale of the subject property, sales prices of comparable properties are usually considered the best evidence of market value. The sales comparison approach mimics the behavior of the market by comparing the properties being appraised with comparable properties that have recently sold. The sales prices will then be adjusted for differences from the subject and a market value for the subject is estimated from the adjusted sales prices of comparable properties.

At present, the district does not develop estimates of value for single-family properties using the traditional sales comparison approach in mass for valuation purposes. The district's software package allows for the creation of sales comparison grids that adjust for characteristic differences among properties, but the district has yet to value entire neighborhoods through this application of the market approach. The sales grids that are generated are utilized most frequently during the appeals process, but may be utilized for valuation more widely in the future as time and available data permit.

Income Approach

The income approach is based on the principle that the value of an investment property reflects the quality and quantity of the income it is expected to generate over its economic life. In other words, value is the estimated present value of future benefits. The appraiser must estimate income from a property and capitalize the income into an estimate of current value.

The model used to estimate the present value of income expected in the future is represented by the following formulas known as IRV.

$$\text{Value} = \text{Income} / \text{Rate}$$

The income approach is most suitable for types of properties frequently purchased and held for the purpose of producing income, such as apartments, commercial buildings, and office buildings. It is not conducive to the valuation of single-family residential properties as these properties are purchased by consumptive users and therefore, neither routinely nor predictably generate an income stream.

RESIDENTIAL PROPERTY INVENTORY

Residential improved and vacant property is appraised in compliance with Section 23.12 (a) of the Tax Code.

In general, the district uses its land value estimates and the actual itemized construction, labor, and material costs, plus other soft or indirect costs to estimate market value as of the appraisal date to estimate the value of improved inventory. The market values of

improved inventory will be reviewed annually and inventory adjustments will be eliminated when ownership transfers from the developer or builder.

Vacant residential lot inventory will be valued using a discounted cash flow formula that considers value relative to the cash flow from lot sales, an appropriate discount rate, and the amount to time that the property is likely to be held or lots sold out of inventory. Since there is no legal requirement that developers or builders render their inventory, a preliminary estimate of inventory value may be difficult to estimate. In these cases, inventory discounts will be applied as a result of an appeal.

COMMERCIAL REAL PROPERTY

Cost Approach

The cost approach to value will be applied using the comparative unit, or square foot method of cost estimating. The following is the basic model that the district utilizes when employing the cost approach:

$$MV = LV + RCNLD$$

This methodology involves the use of national sources of cost data as well as actual cost information gathered from the local market whenever possible. Cost models utilized by the district are based on data obtained by the Marshall Valuation Service also known as *Marshall and Swift*. These costs include comparative base rates, per unit adjustments, and lump sum adjustments as appropriate and necessary to account for the specific factors affecting value. Time and location modifiers will be applied as necessary to adjust cost data to reflect conditions in a specific market as well as changes in costs over a period of time. A cost estimate will be generated by the appraisal staff based upon the cost schedules as they are applied to the specific characteristics of the subject property of the appraisal.

Depreciation schedules have been implemented for economic lives and condition that are typical of each major class of commercial property by property use. The schedules utilized by the district are developed using recognized sources and mirror *Marshall and Swift*. These schedules will be tested annually to ensure they will be reflective of current market conditions in Bexar County. The actual and effective ages of improvements are judged by the appraiser and noted in the improvement records contained within each property record. Effective age estimates will be based on the utility of the improvements relative to the improvement's total economic life, condition, and its competitive position in the marketplace. These adjustments are generally determined during field operations.

Certain adjustment factors such as external and or functional obsolescence will be applied to properties as applicable based upon market data. These adjustments will typically be applied to a specific property type or location and will be developed through ratio studies or other market analyses. Accuracy in the development of the cost schedules, condition ratings, and depreciation schedules usually minimize the necessity of this type of an

adjustment factor. The sum total of depreciation, also expressed as the loss in value from all causes, is subtracted from the replacement cost new of the structure to arrive at a replacement cost new less depreciation (RCNLD).

The cost approach requires the district to value the land utilizing one of the four accepted methods of land valuation: the sales comparison approach, allocation by abstraction, allocation by ratio, or the capitalization of ground rent. Once the land is valued by the method deemed most appropriate in terms of the data available, the resulting land value is added to the RCNLD of the improvements to yield an estimate of market value by the cost approach. Any estimate of value completed by the cost approach will be made in accordance with Section 23.011 of the Tax Code.

Sales Comparison Approach

Pertinent data from actual sales of properties will be obtained throughout the year from various sources and the appraisal staff will analyze the relevant information. This data will be utilized in all aspects of the appraisal process.

Sales of similarly improved properties will provide a basis for the test of depreciation schedules used in the cost approach, capitalization rates and multipliers used in the income approach, and as a direct comparison in the sales comparison approach. Improved sales will also be used in ratio studies, which afford the appraiser a means of judging the present level and uniformity of the appraised values. The ratio studies used by the Commercial Department are in compliance with the current IAAO *Standard on Ratio Studies*.

Based on the market data gathered and analyzed by the appraisal staff, the cost and income models will be calibrated annually. The calibration results will be added to the schedules and models in the CAMA system to apply to all commercial properties in the district as appropriate. Any estimate of value completed by the sales comparison approach will be made in accordance with Section 23.013 of the Tax Code.

Income Approach

The income approach to value will be applied to those real properties that are typically viewed by market participants as income producing. Income producing properties are those which are bought and sold based on the property's ability to produce an income; therefore, the price paid for a property is directly related to the amount of income the property is capable of producing. The commercial appraisal staff utilizes income and expense data furnished by property owners, data collected by staff, and information from local market study publications. Income models by property use and neighborhood / market area are developed and deployed for use in valuation.

The following model is the basis for commercial property valuation by the income approach:

$$\begin{array}{r}
\text{PGR} \\
-\text{V\&C} \\
\hline
\text{EGR} \\
+\text{SI} \\
\hline
\text{EGI} \\
-\text{Allowable EXP} \\
-\text{Reserves for Replacement} \\
\hline
\text{NOI}
\end{array}$$

$$\text{Value} = \text{NOI/CAP Rate}$$

This income model reflects the normalization of an income stream from Potential Gross Rent at 100% occupancy to an indication of Net Operating Income. The process involves estimating the rental producing capacity of the subject property under prudent management (PGR). Market derived vacancy and collections (V&C) losses are subtracted from the potential gross rent to arrive at effective gross rent (EGR). Any net income from secondary property uses (expense pass-throughs, vending income or parking income, etc.) (SI) are added to the effective gross rent to yield an estimate of effective gross income (EGI).

Allowable expenses are the expenses that are recurring annual expenses necessary to operate the property sufficiently to achieve the projected level of effective gross income. These vary by property type and are researched by the commercial appraisal staff. Once identified or projected, the allowable expenses are subtracted from the effective gross income. Reserves for replacement are estimated by considering the amortized costs of replacing certain building components whose economic lives are shorter than total economic life of the improvement (carpets, roof cover, air conditioning, etc.). Generally, these are calculated by either dividing the replacement cost new of the item by its economic life, a flat reserve amount per unit justified by the market, or a percentage of EGI; whichever is deemed appropriate. Once all allowable expenses and reserves have been identified or calculated, these amounts are subtracted from the effective gross income to yield an estimate of net operating income (NOI).

Capitalization rates and multipliers will be used to convert the income stream into an estimate of market value. These include gross income multipliers, overall capitalization rates, and discount rates. Each of these is used in specific applications. Rates and multipliers also vary between property types, as well as by location, quality, condition, design, age, and other factors. Therefore, application of the various rates and multipliers will be based on a thorough analysis of the market.

Direct Capitalization will be used in the income approach models. This methodology involves dividing the net operating income by the appropriate capitalization rate to arrive at an indication of market value for a specific property. Capitalization rates utilized will be derived from the market as to estimate what a market participant would require from an investment as of the date of appraisal. Additionally, overall capitalization rates may be derived from the summation method, band-of-investment, debt coverage ratio, or

obtained from published sources for similar properties. The capitalization rates utilized will relate directly to satisfying the market return requirements of both the debt and equity positions of a real estate investment.

In valuing property by the income approach, the district will consider the income characteristics of all properties as they are available. Adjustments will be made as necessary and appropriate and the models, schedules, and value indications developed will be made pursuant to section 23.012 of the Tax Code.

UTILITIES, RAILROADS, AND PIPELINES

The Bexar Appraisal District will contract with an appraisal firm with specific expertise for the valuation of utility, railroad, and pipeline properties. These properties will be reappraised annually by the firm using recognized methods and techniques as required by the *Uniform Standards of Professional Appraisal Practice*. The appraisal models considered in the valuation of these properties will be:

$$\text{MV} = \text{RCN} - \text{D}$$

And
Allocated Unit Appraisal

Each of the values produced by these models will be considered and the property value will be allocated to the taxing entities based upon the method that is deemed most appropriate by property type.

The appraisal firm(s) will consider all factors affecting value, conduct physical inspection as necessary, research information from published sources, and receive copies of renditions from property owners in the development of their appraisal. Based upon the information gathered in these processes, data characteristics of these properties will be updated annually in accordance with tax code requirements.

The appraisal firm will make all reasonable efforts to identify any business personal property Category J utility properties within Bexar County not currently listed on the appraisal roll.

MINERAL INTERESTS

The Bexar Appraisal District will also contract with an appraisal firm with specific expertise in the appraisal of oil and gas properties to value mineral interests. The appraisal firm will reappraise these properties annually.

The appraisal firm(s) will utilize a form of yield capitalization of the income approach called Discounted Cash Flow Analysis (DCF) in order to accurately value these interests. The factors affecting the value of mineral interests include reserve estimates, production volume and pattern, product prices, operator expenses, and the discount rates applied to discount future income into an indication of present worth.

As mineral reserves are subsurface in nature, this situation makes specific physical inspection unavailable as a method of collecting data. The appraisal firm(s) will collect data from the Texas Railroad Commission, Comptroller of Public Accounts, renditions from owners, published sources, and data services to identify characteristics affecting value. All of the information gathered will be considered in the estimation of the value of mineral interests.

New properties will be identified by the appraisal firm by obtaining information from the Railroad Commission of Texas [RRC] to compare against oil and gas properties already identified.

SPECIAL VALUATION PROPERTIES

The Bexar Appraisal District values agricultural and wildlife management land in compliance with the Comptroller's *Manual for the Appraisal of Agricultural Land*. This publication prescribes that the cash lease and the share lease methods of appraisal are appropriate when developing productivity value estimates.

The cash lease method is a modified income approach using the lease amount (income per acre) minus expenses of the landowner to yield the "net-to-land" value per acre. "Net-to-land" values will be averaged for a five-year period to give an average "net-to-land" factor that will be divided by the appropriate capitalization rate for the year to give a value per class of agricultural production. These classes are determined from field inspections, applications, and agricultural activity. The agriculture appraisal staff will collect lease data from owners and lessees on an ongoing basis in order to develop "net-to-land" figures by agricultural classification.

BUSINESS AND INDUSTRIAL TANGIBLE PERSONAL PROPERTY

These property types will be valued each appraisal year by the district's appraisal staff. The Personal Property Department engages in an annual canvas field review to identify new businesses to be added to the roll, movement of existing businesses to different locations or business closings, and data review of current property characteristics in property records. Once pertinent data is updated in the field, property rendition forms will be sent to owners in order that they may declare their taxable personal property according to current law. The information obtained from renditions will be utilized by the district to develop an estimate of market value. Generally, estimates of value developed for industrial and personal property will be produced by mid to late May of each appraisal year. The notices of appraised value for these property types are generally mailed in early to mid June.

Cost Approach

The primary approach to the valuation of business and industrial personal property will be the cost approach. Cost schedules will be developed by the district's staff and applied

to specific business codes. These schedules will be reviewed and updated annually to conform to changing market conditions.

Valuation models will be created and refined using actual original cost data obtained from renditions to derive the replacement cost new (RCN) per applicable unit for a specific category of assets. The data obtained will be compiled for review and models will be built and or adjusted as necessary. The revised models will be tested in accordance to accepted methods and techniques.

These model values will be used specifically to estimate the value of new accounts for which no property owner's rendition is filed. The models will also be utilized to test renditions filed by property owners or their agents. In the event that property rendition information falls significantly outside of a statistical tolerance from the model, further review of the property may be conducted.

The percent good depreciation factors utilized will be based on the depreciation schedules for furniture, fixtures, and equipment as developed by district staff tested against *Marshall and Swift*. This mass appraisal percent good depreciation schedule is used to ensure that estimated values are uniform and consistent within the market. RCN and percent good depreciation factors will be utilized to develop value estimates using the following formula:

$$MV = RCN \times \text{PERCENT GOOD FACTOR}$$

Additional functional and economic obsolescence will be considered and evaluated based upon production documentation provided by the property owner.

Leased equipment and multi-location assets may be valued using original costs and percent good depreciation schedules mentioned above.

Sales Comparison Approach

Business personal property is typically sold as part of the business as a whole which makes this approach less suitable for valuing most personal property. This approach is generally suitable for the valuation of certain types of vehicles and heavy equipment. Value estimates for vehicles will be based on data furnished by recognized sources such as NADA among others. Any sales of personal property will be considered and appropriate weight will be given based upon individual circumstance.

Income Approach

The income approach has limited use in the appraisal of machinery, equipment, furniture, fixtures, and leasehold improvements because of the difficulty in estimating future net benefits. The exception to this is in the case of leased equipment. When reliable data on equipment leases is available, the income approach may be used to estimate the fair market value of the equipment.

BUSINESS PERSONAL PROPERTY INVENTORY

Business Personal Property inventory is appraised in compliance with Section 23.12 (a) of the Property Tax Code. It is the policy of the Bexar Appraisal District to appraise inventory at its market value based on the Cost Approach. The Cost Approach is replacement cost new less accrued depreciation (physical, functional & economic). FIFO (First In, First Out) is generally considered an acceptable measure of inventory replacement cost new (RCN) and thus establishes the first component in the Cost Approach equation. Accrued depreciation is derived from property owner's financial documents and is identified as the "lower of cost or market" adjustment. Such adjustment generally accounts for damaged, lost, slow-moving, and obsolete inventory. This data must be furnished to the Bexar Appraisal District in order for it to be considered in the final market value determination.

THE MASS APPRAISAL REPORT

This reappraisal plan specifies the scope of work planned by the Bexar Appraisal District in order to produce credible results culminating in the official appraisal rolls for 2015 and 2016. Each appraisal year the district plans to prepare the USPAP required Mass Appraisal Report and it will be certified by the Chief Appraiser at the conclusion of the appraisal phase of the ad valorem tax calendar (on or about May 15th). The Mass Appraisal Report is completed in compliance with STANDARD RULE 6-8 of the *Uniform Standards of Professional Appraisal Practice*. The signed certification by the Chief Appraiser will be compliant with STANDARD RULE 6-9 of *USPAP*.

VALUE DEFENSE

To meet the district's burden of proof for market value and equity in informal and formal appraisal review board hearings, a variety of evidence is utilized and is dependent upon the property type of the subject. The evidence supplied to an owner, agent, or the Appraisal Review Board is updated to be contemporaneous with the valuation procedures utilized. Some examples of the evidence that may be used include, but are not limited to:

1. Property sales information
2. Property sales adjustment grids
3. Property equity adjustment grids
4. Gross Rent / Income Multiplier data
5. Pro forma and actual income data
6. Property characteristics data including photos as applicable
7. Aerial photography
8. Cost approach reports as applicable
9. Property Renditions as applicable
10. Vehicle and aircraft price guides
11. Published reports regarding cost, market, or income data
12. Schedules and or models utilized
13. Any other information collected by the district

Appendix A - 2015 Appraisal Year Calendar

*Specific dates are proposed estimates, and subject to change based on unforeseen circumstances.

August 2014	
1-Aug thru 31-Aug	<ul style="list-style-type: none"> • Collect, verify, and process sales information. • Review commercial publications and gather market data. • Collect and input building permits, fire reports, demolition reports, and manufactured home abandonment reports. • Update real property ownership as deeds are filed with the county clerk. • Update manufactured home ownership as Statement of Ownership and Locations are processed with TDHCA. • Discovery of agricultural land change of use. • Process partial exemptions. • Create merges and splits for land parcels. • Track TDLR Education Courses and send staff to courses for their RPA designation or CEU requirements as necessary. • Review and prepare appraisals on litigated accounts. • Prepare accounts for arbitration or SOAH.
1-Aug thru 8-Aug	<ul style="list-style-type: none"> • Informal hearings scheduled.
1-Aug thru 15-Aug	<ul style="list-style-type: none"> • Formal hearings scheduled.
1-Aug	<ul style="list-style-type: none"> • Electronic Property Transaction Submission due to PTAD.
8-Aug	<ul style="list-style-type: none"> • Lock supplement.
12-Aug	<ul style="list-style-type: none"> • Send supplement to taxing jurisdictions and tax office.
16-Aug	<ul style="list-style-type: none"> • Create 2015 Year Layer in CAMA System.
18-Aug thru 31-Aug	<ul style="list-style-type: none"> • Conduct field training. • Residential management assesses workload to staffing and redistributes fieldwork assignments as necessary. • Review sketch overlay. • Begin field work relating to reappraisal and inspection of identified properties. • Begin discovery of new improvements. • Begin personal property discovery and on-site verification of all properties. • Begin account by account review of all commercial properties.
18-Aug	<ul style="list-style-type: none"> • Run pilot ratio study using last year's value.
25-Aug	<ul style="list-style-type: none"> • Board of Directors meeting fourth Monday of the month, if necessary.
September 2014	

1-Sept thru 30-Sept	<ul style="list-style-type: none"> • Collect, verify, and process sales information. • Review commercial publications and gather market data. • Collect and input building permits, fire reports, demolition reports, and manufactured home abandonment reports. • Update real property ownership as deeds are filed with the county clerk. • Update manufactured home ownership as Statement of Ownership and Locations are processed with TDHCA. • Discovery of agricultural land change of use. • Process partial exemptions. • Create merges and splits for land parcels. • Track TDLR Education Courses and send staff to courses for their RPA designation or CEU requirements as necessary. • Review and prepare appraisals on litigated accounts. • Prepare accounts for arbitration or SOAH. • Park Listings are verified for ownership and status of manufactured homes on site. • Continue field work relating to reappraisal and inspection of identified properties. • Continue discovery of new improvements. • Continue personal property discovery and on-site verification of all properties. • Continue account by account review of all commercial properties. • Run ratio studies to monitor reappraisal activities.
1-Sept	<ul style="list-style-type: none"> • Electronic Appraisal Roll Submission due to PTAD.
9-Sept thru 11-Sept	<ul style="list-style-type: none"> • Formal hearings scheduled.
12-Sept	<ul style="list-style-type: none"> • Lock supplement.
15-Sept	<ul style="list-style-type: none"> • Board of Directors adopt 2015 Appraisal District Budget. • Board of Directors adopt Biennial Reappraisal Plan for 2015 and 2016.
16-Sept	<ul style="list-style-type: none"> • Send supplement to taxing jurisdictions and tax office.
22-Sept	<ul style="list-style-type: none"> • Board of Directors meeting fourth Monday of the month, if necessary.
October 2014	
1-Oct thru 31-Oct	<ul style="list-style-type: none"> • Collect, verify, and process sales information. • Review commercial publications and gather market data. • Collect and input building permits, fire reports, demolition reports, and manufactured home abandonment reports. • Update real property ownership as deeds are filed with the county clerk. • Update manufactured home ownership as Statement of Ownership and Locations are processed with TDHCA.

	<ul style="list-style-type: none"> • Discovery of agricultural land change of use. • Process partial exemptions. • Create merges and splits for land parcels. • Track TDLR Education Courses and send staff to courses for their RPA designation or CEU requirements as necessary. • Review and prepare appraisals on litigated accounts. • Prepare accounts for arbitration or SOAH. • Continue field work relating to reappraisal and inspection of identified properties. • Continue discovery of new improvements. • Continue personal property discovery and on-site verification of all properties. • Continue account by account review of all commercial properties. • Run ratio studies to monitor reappraisal activities. • Review and update improvement schedules as necessary. • Review and revalue land in areas as determined by ratio studies. • Review and update business personal property schedules. • First round of quality control for field efforts. • Process MAP review request for data.
14-Oct	<ul style="list-style-type: none"> • Monthly ARB hearings and ARB full meetings held on second Tuesday of the month, if necessary.
17-Oct	<ul style="list-style-type: none"> • Lock supplement.
21-Oct	<ul style="list-style-type: none"> • Send supplement to taxing jurisdictions and tax office.
27-Oct	<ul style="list-style-type: none"> • Board of Directors meeting fourth Monday of the month, if necessary.
November 2014	
1-Nov thru 30-Nov	<ul style="list-style-type: none"> • Collect, verify, and process sales information. • Review commercial publications and gather market data. • Collect and input building permits, fire reports, demolition reports, and manufactured home abandonment reports. • Update real property ownership as deeds are filed with the county clerk. • Update manufactured home ownership as Statement of Ownership and Locations are processed with TDHCA. • Discovery of agricultural land change of use. • Process partial exemptions. • Create merges and splits for land parcels. • Track TDLR Education Courses and send staff to courses for their RPA designation or CEU requirements as necessary. • Review and prepare appraisals on litigated accounts. • Prepare accounts for arbitration or SOAH. • Continue field work relating to reappraisal and inspection of identified properties. • Continue discovery of new improvements.

	<ul style="list-style-type: none"> • Continue personal property discovery and on-site verification of all properties. • Continue account by account review of all commercial properties. • Run ratio studies to monitor reappraisal activities. • Continue to review and revalue land in areas as determined by ratio studies. • Continue to review and update business personal property schedules. • Prepare employee evaluations. • Process MAP review request for data.
11-Nov	<ul style="list-style-type: none"> • Monthly ARB hearings and ARB full meetings held on second Tuesday of the month, if necessary.
14-Nov	<ul style="list-style-type: none"> • Lock supplement.

Appendix C: Commercial Markets

Commercial Work Area Map

The Office use types include a further refinement of market areas into sub-markets:

Office Submarkets & Corresponding Commercial Work Areas	
Office Market Sector	Corresponding Work Area
Central Business District (CBD)	1
North Central	2, 14, 16, 17, 20, 21 and part of 31
North East	4, 5, 18, 19, 24, 25, 27 and part of 7 & 31
North West	3, 6, 12, 13, 15, 22, 23, 30
South	8, 9, 10, 11, 32, 33 and part of 7

Commercial Work Area Boundaries

There geographical areas are numbered 1 through 33 with numbers 26 and 28 currently not in use. The geographical boundaries of each Work Area are determined roughly by political subdivisions, geographic or demographic characteristics.

Each Work Area is further broken into neighborhoods. The boundaries of the neighborhoods typically follow both sides of major thoroughfares, beginning and ending at discernible changes in demographic characteristics or at the boundaries of the individual Work Areas. Those areas not immediately along a major thoroughfare are defined as “rear” neighborhoods. The purpose of the neighborhoods primarily is to set base land rates determined by the highest and best use of each parcel. These rates are determined by the “land label” assigned each parcel with each land label having a base rate appropriate for the use it describes.

The Commercial Work Areas are as follows:

Work Area 1:

The Central Business District (CBD) of San Antonio is defined by a loop of Interstate Highways comprised of IH 10 to the south and west, IH 35 to the north and IH 37 to the east. The CBD contains the major tourist destinations of the Alamo, the Riverwalk, and the King William historical neighborhood, along with the full and limited service hotels that serve the tourism industry. There is also a large concentration of multi-tenant office buildings. Major non-highway thoroughfares include: Houston St, Commerce St, Market St, Cesar Chavez Blvd (FKA Durango Blvd), Alamo St, Main St, Flores St, St Mary’s St, Market St, Broadway, and Quincy St.

Work Area 2:

Central/north central area of the county that is bounded by IH 35 on the south, Hwy 281 on the east, IH 10 on the west and Loop 410 on the north. This area contains a large amount of middle class single family residences, retail, office, light industrial and multi-family. Major properties include North Star Mall, Park North Center and The Pearl. Major non-highway thoroughfares include: San Pedro Ave, McCullough Ave, West Ave, Jackson-Keller Rd, Blanco Rd, Hildebrand Ave and Rector St.

Work Area 3:

Northwest/central area of the county that is bounded generally by Culebra Rd on the south, IH 10 on the east, Loop 410, Wurzbach Rd and Ingram Rd on the north and west and includes the bedroom community of Balcones Heights. This area contains a large amount of middle class single-family residences, retail, office, light industrial and multi-family. Major properties include Wonderland of the Americas and Ingram Park Mall. Major non-highway thoroughfares include: Fredericksburg Rd, Bandera Rd, Culebra Rd, and Ingram Rd.

Work Area 4:

Northeast/central area of the county that is bounded by IH 35 on the south and IH 35/410 on the east, Loop 410 on the north and Hwy 281 on the west and includes the bedroom communities of Alamo Heights, Terrell Hills and the U.S. Army installations Ft. Sam Houston and San Antonio Area Medical Center (SAMC). This area contains a large amount of affluent single family residential neighborhoods, retail office, and multi-family and light industrial. Major non-highway thoroughfares include: Broadway, New Braunfels Ave, Austin Hwy, Harry Wurzbach Rd, Nacogdoches Rd and Binz Engleman.

Work Area 5:

Central/north central area of the county that is bounded by Burr Rd and Hildebrand on the south, McCullough Ave and Hwy 281 on the west, Tuxedo Ave, Oakview Pl and Rittiman Rd on the north and Harry Wurzbach Rd on the east and includes the bedroom community of Olmos Park. This area contains a large amount of affluent single family residential neighborhoods, retail, office, multi-family and light industrial. Major non-highway thoroughfares include: McCullough Ave, Broadway, Austin Hwy, Rittiman Rd and Harry Wurzbach Rd.

Work Area 6:

Central/west central area of the county that is bounded by Callaghan Rd on the west, Culebra Rd on the north, IH 10 on the east and Hwy 90 on the south. This area contains a large amount of lower socio-economic class residential neighborhoods, retail, multi-family, heavy industrial, light industrial, government and farm land. Major non-highway thoroughfares include: Culebra Rd, Callaghan Rd, General McMullen, Frio St, Commerce St and Old Hwy 90 W.

Work Area 7:

Central/east central area of the county that is bounded by Hwy 281/IH 37 on the west, IH 35 on the north, Loop 410 on the east and Roland Ave and IH 10 on the south. This area contains industrial, retail, office, hospitality and lower socio-economic residential neighborhoods. Major properties include the Alamo Dome, AT&T Center, Freeman Coliseum and St Paul Square. Major non-highway thoroughfares include: Commerce St, New Braunfels Ave, Rigsby Ave, Roland Ave, W W White Rd and Houston St.

Work Area 8:

Central/southeast area of the county that is bounded by IH 37 on the south and west, IH 10 and Roland Ave on the north and Loop 410 on the east. This area contains retail, medical, office, light industrial and lower socio-economic class residential neighborhoods. Major non-highway thoroughfares include: Roland Ave, Pecan Valley Dr, SE Military Dr, and Southcross Blvd.

Work Area 9:

Central/south central area of the county that is bounded by IH 35 on the west, IH 10 on the north, IH 37 on the east and SE Military Dr and SW Military Dr on the south. This area contains retail, office, medical and lower socio-economic neighborhoods. Major properties include Mission Conception and Mission San Jose. Major non-highway

thoroughfares include: Southcross Blvd, Presa St, Mission Rd, Roosevelt Ave, Probandt St, Flores St, Pleasanton Rd and SE and SW Military Dr.

Work Area 10:

Central/southwest area of the county that is bounded by IH 35 on the east and south, Loop 410 on the west and Hwy 90 on the north. This area contains industrial, retail, office, multi-family and lower socio-economic neighborhoods. Major properties include Port San Antonio (formerly Kelly AFB) and Lackland AFB. Major non-highway thoroughfares include: SW Military Dr, Nogalitos St, Frio City Rd, New Laredo Hwy, Quintana Rd, Old Pearsall Rd and General Hudnell.

Work Area 11:

Central/south central area of the county that is bounded by Loop 410 on the south, IH 35 on the west, SE Military Dr on the north and IH 37 on the east. This area contains retail, industrial, lower socio-economic neighborhoods, office and medical. Major properties include Mission San Juan Capistrano, Stinson Municipal Airport and San Juan Missions National historical park. Major non-highway thoroughfares include: SE Military Dr, Mission Pkwy, Palo Alto Rd, Commercial Ave, Goliad Rd, Moursund Blvd, Roosevelt Ave, Flores St and Presa St.

Work Area 12:

West/central area of the county that is bounded by Hwy 90 on the south, Loop 410 on the west, Culebra Rd on the north and Callaghan Rd on the east. This area contains retail, office and lower middle class neighborhoods. Major non-highway thoroughfares include: Old Hwy 90, Callaghan Rd, Pinn Rd, Military Dr W, Marbach Rd, Hwy 151 and Commerce St.

Work Area 13:

Northwestern area of the county that is bounded (roughly) by Timberhill Dr, Huebner Rd and Penguin Trl on the west, Eckert Rd, Bluebird Ln and Hoofs Ln on the northwest, Canterfield Rd and Evers Rd on the northeast and Callaghan Rd and Seville Dr on the southwest. This area contains a large amount of middle class neighborhoods, retail and light industrial. Major thoroughfares include: Bandera Rd, Evers Rd, Loop 410, Huebner Rd and Wurzbach Rd.

Work Area 14:

Northwest area of the county that consists entirely of the bedroom community of castle Hills. The boundaries are Jackson Keller Rd on the southwest, West Ave on the west, Wedgewood on the northwest, Lockhill Selma Rd and NW Military Hwy on the northeast and Blanco Rd on the east. This area contains upper middle class neighborhoods, retail, office and government. Major non-highway thoroughfares include: Blanco Rd, Loop 410, Lockhill Selma, NW Military Hwy, West Ave and Jackson Keller Rd.

Work Area 15:

Northwest area of the county that is bounded by IH 10 on the east, Loop 410 on the south, Snowden, North Knoll, Lomax, Eckert Rd and Bandera on the west and Cedar Pt,

Ruidosa Downs, Green Glen and Camp Bullis Rd on the north. This area consists of medical, office, multi-family, retail and hospitality properties. Major properties include the South Texas Medical Center, UTSA, Valero Corp Headquarters, USAA Corporate headquarters, The Eilan, The Shoppes at La Cantera, Weston La Cantera Resort and The Rim. Major thoroughfares include: Fredericksburg Rd, Medical Dr, Babcock Rd, Huebner Rd, Ewing Halsell Rd, Bandera Rd, Loop 1604, La Cantera Pkwy, Wurzbach Rd and De Zavala Rd.

Work Area 16:

North/central area of the county that is bounded by IH 10 on the west, Loop 1604 on the north, Hwy 281 on the east and Loop 410 on the south. This area consists of large areas of middle class and upper middle class residential areas, retail, office, multi-family, light industrial and government. Major properties include La Plaza Del Norte, San Pedro Crossing, Cityview Tower, Callaghan Tower and SWBC (Nowlin) Tower. Major non-highway thoroughfares include: Blanco Rd, NW Military Hwy, Lockhill Selma Rd, Huebner Rd, De Zavala Rd, West Ave, Bitters Rd and Nakoma Dr.

Work Area 17:

Central/northeast area of the county that is bounded by Hwy 281 on the west, Loop 1604 on the north, Stahl Rd and Wetmore Rd on the east and Loop 410 on the south. This area consists of a large area of middle class residential areas, office, retail and light and medium industrial. Major properties include, San Antonio International Airport, Northwoods power center and Bulverde Marketplace. Major non-highway thoroughfares include: Nakoma Dr, Bitters Rd, Isom Rd, Thousand Oaks, Judson Rd, Bulverde Rd, Wetmore Rd, Stahl Rd and Jones Maltsberger Rd.

Work Area 18:

Central/northeast area of the county that is bounded by Wetmore Rd and Stahl Rd on the west, Loop 410 and Walzem Rd on the south, roughly Windrock, Parkcrest Dr, Weidner Rd and Randolph Blvd on the east, almost Loop 1604 on the north and Stahl Rd and Wetmore Rd on the west. This area consists of middle class residential neighborhoods, light, medium and heavy industrial, multi-family, office and retail. Major properties include Petroleum Plaza, Frost Bank Tower, and the Crowne Plaza. Major non-highway thoroughfares include: Wetmore rd, Nacogdoches Rd, Broadway, New Braunfels Ave, Thousand Oaks, Oconnor Rd, Perrin Beitel Rd, Walzem Rd, Randolph Blvd, and Toepperwein Rd.

Work Area 19:

Northeast area of the county that is bounded by Gibbs Sprawl, FM 78 and Springfield Rd on the north and west, Corner Parkway and Binz Engleman Rd on the south and roughly Ackerman Rd on the east. This area consists of retail and light industrial properties. Major non-highway thoroughfares include: Binz Engleman Rd. Ackerman Rd, FM 78 and Binz Engleman Rd.

Work Area 20:

Central area of the county that is bounded by Hwy 281 on the east, Loop 1604 on the north, Canada Verde, Havenhurst, Axis trail and Wolf Creek on the west, Bitters Rd on the south and consists entirely of the bedroom communities of Hill Country Village and Hollywood Park. This area consists mainly of retail and office. Major thoroughfares include: Hwy 281 and Bitter Rd.

Work Area 21:

North/central area of the county that is bounded by Lockhill Selma Rd on the west, Loop 1604 on the north, Salado Creek on the east, Huebner Rd on the south and consists entirely of the bedroom community of Shavano Park. This area consists mainly of office, and retail. Major thoroughfares include: Lockhill Selma, Huebner Rd and NW Military hwy.

Work Area 22:

Northwest area of the county that is bounded by Loop 1604 on the west and north, Bandera Rd on the north and east and Culebra rd on the south and west. This area consists of large areas of middle class neighborhoods, retail, multi-family, office and light industrial. Major properties include Bandera Pointe power center, Brynwood Apartments, Wal-Mart and HEB Grocery. Major thoroughfares include: Bandera Rd, Culebra Rd, Loop 1604, Tezel Rd, Guilbeau Rd, Braun Rd and Grissom Rd.

Work Area 23:

Western area of the county that is bounded by Loop 1604 on the west, Culebra Rd on the north, Loop 410 on the east and Hwy 90 on the south. Appendix D: Business Personal Property Markets

Business Personal Property Work Area Map

Business Personal Property Regional Boundaries

REGION I:

- Geo-Areas # 16, 20, 21, 43
- All of IH 10 W outside Loop 410
- Section of Loop 410 between IH 10 W and San Pedro Ave to exclude City of Castle Hills
- Section of Loop 1604 between IH 10 W and Hwy 281 N

REGION II:

- Geo-Areas # 17, 18, 44
- San Pedro Ave outside Loop 410 & Hwy 281 N outside Loop 1604
- Section of McAllister Fwy between Loop 410 NE and San Pedro Ave
- Section of Loop 410 between San Pedro Ave and IH 35 N
- Section of Loop 1604 between Hwy 281 N and Nacogdoches Rd
- Section of Nacogdoches Rd between Loop 410 NE and the Bexar County Line
- Section of Randolph Blvd between Loop 410 NE and Toepperwein Rd
- Toepperwein Rd will be part of Areas #24 and #27

REGION III:

- Geo-Areas # 04, 24, 25, 27, 45
- Area #04 will exclude the City of Alamo Heights and Terrell Hills (Area #05)
- Area #25 will exclude the City of Kirby (Area #19)
- Section of IH 37 N between Loop 410 NE and IH 35 N
- Section of IH 35 N between IH 37 N and Walzem Rd
- Section of IH 35 N between Toepperwein Rd and the Bexar County Line
- Section of Loop 410 SE between IH 35 N and Hwy 181 S
- Section of Loop 1604 between Nacogdoches Rd and Hwy 181 S
- All of IH 10 E outside Loop 410
- Section of IH 37 S between Loop 410 SE and Hwy 181 S

REGION IV:

- Geo-Areas # 01, 07, 19, 46
- Section of IH 37 N between IH 35 N and IH 10 E
- Section of IH 10 E between IH 35 S and Loop 410 SE
- All of IH 37 S past Hwy 181 S
- All of Hwy 181 S outside Loop 410 SE
- Section of Loop 410 SE between Hwy 181 S and Hwy 281 S
- Section of Loop 1604 between Hwy 181 S and Hwy 281 S

REGION V:

- Geo-Areas # 05, 08, 09, 10, 11, 47
- Section of IH 37 S between IH 10 E and Loop 410 SE
- Section of IH 35 S between IH 10 E and Loop 410 SW

- All of Hwy 281 S beginning at Loop 410 SE
- Section of Loop 410 SW between Hwy 281 S and Hwy 90 W
- Section of Loop 1604 between Hwy 281 S and IH 35 S

REGION VI:

- Geo-Areas # 03, 06, 12, 48
- All of IH 35 S outside Loop 410 SW
- Section of Loop 1604 between IH 35 S and Hwy 90 W
- Section of Hwy 90 W between IH 35 S and Loop 410 NW
- Section of Hwy 151 between Hwy 90 W and Loop 410 NW
- Section of Loop 410 NW between Culebra Rd and Bandera Rd
- Section of IH W between Loop 410 NW and Hwy 90 W
